

Press Release – For immediate Release

MultiTouch launches the first modular multi-touch LCD screen

MultiTouch is launching the world's first modular multi-touch LCD screen that can be used to create large tables and wall screens. Screens made of MultiTouch Cells can be used simultaneously by any number of users. The Multitouch Cell works in all light conditions.

The Multitouch Cell is available in 32" and 46", as Full HD or HD-ready LCD versions. The Cells can be positioned in portrait or landscape mode and can be composed into large multi-touch walls or table screens. The MultiTouch Cell uses a LCD display and has advantages compared to current projector-based systems improving in durability (50000 vs. 3000 hours), in image resolution and contrast, colour quality, and in ease of setup and maintenance.

The MultiTouch Cell allows the direct use of hands, for example to play games, sketch, manipulate, and play around with maps, pictures, and videos. With these qualities it is a tool to interact with media in an engaging way for visual communication of products and corporate identity, information centres, edutainment, group work applications, and control rooms.

MultiTouch Cells includes a high-performance system for tracking any number of hands on the screen at 60 frames per second, both in bright daylight and dark environments. This is a truly multitouch system that tracks not only points but actual fingers and hands and therefore facilitates richer and more engaging interaction.

About MultiTouch

MultiTouch commercialises both hardware and software solutions to create large multitouch screens. The MultiTouch technology has already been used to create large multitouch installations up to 6 metres in width.
